MÉTÉOR 2

Météor's distinct design using a metal piece covered with polymer provides a much longer lifespan than fabric bags. You'll wear out before it does!

THROWBAGS

DESCRIPTION

The MÉTÉOR 2 are innovative throwbags. They are made up of a metallic core and a polymer shell with 2 densities. The drop shape gives them a great precision and dynamism, with a very high resistance for a powerful throw and a much longer lifespan than with fabric bags.

The MÉTÉOR 2 contains no lead: no more lead balls spread in nature by a damaged throwbag.

The compact, streamline shape helps manipulating the bag in the tree. It is easily spotted as well, with the high visibility colours and "checked effect". The profile of the ring and its oblong section help fixing the line and prevents it from slipping.

Only one size for 5 weights, easily identified with the colours.

TECHNICAL INFORMATION

Core	steel
Shell	bi-density polyurethane
Ring	stainless steel
Weight	225 g (7.9 oz) / 250 g (8.8 oz) / 300 g (10.6 oz) / 350 g (12.3 oz) / 385 g (13.6 oz)
Dimensions	8.3 cm high (ring not incl. - 3.3 in), 4,6 cm diameter (1.8 in)
Ring breaking strenght	250 kg (551.2 lb)
